(54) Title: DATA COPY DEVICE

[SEL = 1, WRITE Operation]

(57) Abstract: The invention relates to a data copy device engaged between two storage media each connected to an IDE or IDE-compatible interface, especially relates to a data copy device which requires both minimal memory usage and minimal control burden, and further provides much enhanced data copying speed, i.e. more or less double speed. According to the present invention, the data copy device is advantageous in that lower price may be attained by minimal memory and minimal power control module, and higher copy speed can be simultaneously attained.
